

# Ditch Light Hood Bracket Installation

1. The Ditch Light Hood Bracket kit will include a driver and passenger side bracket. These brackets are side specific. (Example A.) Installation of the brackets is quite simple and recommend installing one side at a time. This kit will use all OEM hardware on the vehicle.
2. Beginning with the passenger side, remove the forward most bolt of the two that mount the hood to the hinge.
3. Attach the bracket for the passenger side and replace the bolt for the hinge while keeping it loose enough to move the Ditch Bracket. Then remove the second hinge bolt. (See Example B.)
4. Once the second bolt is removed, pivot bracket into position and replace bolt. Position bracket forward or back based on dimensions of lights being used. Slowly lower hood and ensure proper fitment and clearance of bracket. Tighten both bolts. (See Example C.)
