INSTALLATION STEPS:

****Use hand tools, impact wrenches may cause damage if over torqued.****

- 1) Begin by unpacking and removing all components and hardware. Please verify that all hardware and mounting components are present. Reference your original order invoice and verify all items are accounted for.
- 2) Insert the MP2 Mounting Plates into the rear vehicle crossmember. Align the threaded holes of the MP2 with the large holes in the vehicle crossmember.
 - a. Insert the MP2 plates into the crossmember from the slotted cutouts in the crossmember.

- b. Align the threaded ends of the MP2s with the large holes in the rear crossmember.

- 3) Prepare front for installation.
 - a. If installing the 24+ Toyota Hybrid Transmission Skid Plate in conjunction with the 24+ Landcruiser Engine Skid Plate, loosen the engine skid plate mounting hardware so there is at least 1/4" gap between the rear of the engine skid plate and the vehicle crossmember.

- b. If installing the 24+ Toyota Hybrid Transmission Skid Plate without the 24+ Landcruiser Engine Skid Plate, loosely install a set of M8 bolts in the crossmember.
- 4) Slide the front mounting flange of the transmission skid plate between the vehicle crossmember and the engine skid plate or the M8 hardware.
- 5) Hold the skid plate assembly up to the vehicle frame and loosely install the included M10 hardware through the rear of the transmission skid plate and into the MP2 plates in the crossmember.

6) Finishing up.

- a. If installing the 24+ Landcruiser T-Case Skid Plate, proceed to the appropriate installation guide.
- b. Otherwise, slide the included 3/8" ("U" shaped) transmission spacers between the vehicle frame and the rear mounting face of the 24+ Toyota Hybrid Transmission Skid Plate and tighten all hardware.
